FROZEN BIBLIOGRAPHY OF VASSILIEV INVARIANTS

DROR BAR-NATAN

This bibliography is available electronically at `http://www.math.toronto.edu/~drorbn`. The html version has some hyperlinks!

This bibliography is frozen (see Section 5).

This is a partial bibliography of papers on Vassiliev invariants. It aims to be a complete listing of all the papers on the subject, but at this time, it still fails. If your paper (or a paper you are aware of) is omitted (or abused in any other way), it is simply because of the haphazard way by which this bibliography is organized, and not because of a secret plan of mine to ruin your (or anybody else's) reputation. Let me know (please... I want this bibliography to be as complete as possible!) and it will be fixed. Allow me just one selfish rule: I will not enter any paper into this bibliography unless I have (or I am given) a copy of it.

2. Electronic Addresses

This bibliography is frozen (see Section 5).

http://www.pdmi.ras.ru/~duzhin/VasBib.

Here are some author's email, http, and ftp addresses (notice that electronic addresses are constantly changing, so the list below cannot be reliable. Please let me know if you have any additions/corrections). I've started this list before spam went out of control. I feel that the benefit of having it still outweighs the damage it may cause (Some unwanted mass mailing to all who's interested in finite type invariants by some publisher? Unpleasant but we can live with that). However, if you want your name removed please send me a message and I will quickly comply.

5. Notice of Retirement

Exactly 10 years since the beginning of the "List of Additions" in Section 1, on June 30, 2005, I have stopped updating this bibliography.

Sergei Duzhin continues to update his version of this bibliography. Visit it at
